

DABELJU[®] - VV

The versatile concept!
Pat. Pending

How much loading capacity is provided
by this mobile rack?

(You will find the answer at the back.)

DABELJU® - VV

The versatile concept!
Pat. Pending

DABELJU® - VV supports the work flow of manufacturing processes!

• Batch loading

Work pieces of 200mm to about 2,500mm length can be loaded onto the rack together. The capacity is optimised through the V-shaped design of the four swivel racks.

• Unrestricted access to individual work pieces

Pre-sorting for the various manufacturing steps is eliminated.

• Mobile interim storage

Due to the semi-elastic wheels vibrations are greatly reduced, so the fully loaded rack can easily be rolled by one person from one workstation to the next. The rack supports the work flow from cutting to completion.

• Surface protection of work pieces

The rack bars have a plastic cover that is resistant to solvents and compatible with all the commonly used varnishing systems.

DABELJU® - VV sets new standards of convenience and flexibility!

• Optimised use of space

The rack length is continuously adjustable between 300mm and 1,500 mm and can within a few seconds be fixed with two excenter arms at the desired length.

• Flexible storage

Two racks are mounted to each side of the frame and can in a continuous movement be swung towards each other at an adjustable angle.

• Flexible height

Even work pieces with a great thickness can be easily loaded by loosening one hexagonal screw and removing one or several bars.

• Double-sided use

The frame is equipped with a telescopic extension to provide full support in case two of the racks are swung towards the back to make the mobile rack accessible from two sides.
